Education

Safeguard your district through modern endpoint management

How is your district adapting to modern-day cyber threats?

Hybrid and remote learning have made education the most targeted industry for cyber crime with a 400% increase in breaches in recent years. IT staff at K-12 districts are often understaffed and overwhelmed, making schools a prime target for cyber criminals. It can be challenging for K-12 districts to know what's in their IT environment and to get basic control of their endpoints (devices) that staff and students rely on daily.

Tanium supports K-12 districts by providing a converged endpoint management platform that gives real-time visibility and control needed for managing endpoints, preventing ransomware and providing reliable data to cyber insurance companies. That means schools can identify security gaps and more easily manage their devices and take control of their cyber hygiene.

Steps to Modern Endpoint Management

Reducing your attack surface and protecting student identities starts with knowing what's in your environment. Can you confidently answer these questions?

Step	Category	Questions
5	**Threat Remediation**	How quickly can you respond to a ransomware attack?
4	**Sensitive Data**	Do you know what devices contain sensitive student and staff data?
3	**Risk & Compliance**	Are you confident your district's devices are fully updated? Are you compliant with cyber insurance requirements?
2	**Asset Management**	How are you patching and managing your devices? Are you paying for software you aren't using?
1	**Visibility**	Do you know how many devices you have in your district? Do you know what software is installed on each device?

Tanium, the industry's only provider of converged endpoint management (XEM), leads the paradigm shift in legacy approaches to managing complex security and technology environments. Only Tanium protects every team, endpoint, and workflow from cyber threats by integrating IT, Compliance, Security, and Risk into a single platform that delivers comprehensive visibility across devices, a unified set of controls, and a common taxonomy for a single shared purpose: to protect critical information and infrastructure at scale.
