

# Tanium regularly eliminates the need for single point solutions such as Automox

Silos don't work. That's why Tanium's Converged Endpoint Management (XEM) platform provides a single control pane that locates all data, patches devices in seconds, implements critical security controls, and provides ongoing compliance.

## The Tanium advantage

	Unites IT Operations and Security teams from the cloud	Real-time control	Complete endpoint visibility	99% successful patch remediation on first pass	Comprehensive platform solution
	✓ Unites Operations and Security workflows	✓ Interacts directly with endpoints in seconds	✓ Tanium patented engineering reveals on average 20% unaccounted for endpoints	✓ Certainty that nearly everything is patched in minutes/hours	✓ Eliminate point solutions with a complete management platform
<b>Automox</b>	✗ IT Operations silo	✗ Relies on information from a database that may quickly become obsolete	✗ Legacy design results in unseen endpoints	✗ Frequently unable to report completion. Staggered workflow.	✗ One more point solution to deal with

## Tanium vs Automox

Tanium is the world's first Converged Endpoint Management (XEM) solution: a single platform that can identify where all your data is, patch every device you own in seconds, implement critical security control tools and do it all within a single pane of glass. A single platform that provides real-time data and has real-time impact.

Point solutions like Automox intrinsically create silos based on the very core of their design. Tanium actively unifies workflows; gone are the days of siloed teams referencing different datasets or struggling to confederate data into cohesive reporting.

## Try Tanium today

Experience endpoint management and security built for the demands of highly distributed, complex and modern enterprise networks.
