

What is the Tanium Ask Agent?

The Tanium Ask Agent is an agentic AI experience that transforms how administrators manage and secure their environments. Leveraging the real-time endpoint intelligence that the Tanium platform can uniquely deliver, Tanium Ask Agent provides high-impact actionable insights that empower rapid, automated responses with human-in-the-loop control.

Example: Data Discovery Agent

Agentic AI Workflows

Data Discovery

Leverage actionable insights to accelerate investigation, troubleshooting, and reporting.

Software Management

Reduce out-of-date or unapproved tool usage by finding and managing software and updates in Tanium.

Dashboard Summarization

Quickly understand the key takeaways of any dashboard using natural language summaries.

In-Console Docs

Query user guides from within the Tanium Console with an embedded reference link using natural language and common keywords.

Suggested Prompts

- What endpoints are vulnerable to CVE-2025-8088?
- What are the system specifications of my poorly performing devices?
- Determine endpoint readiness for software deployment
- Remove Chrome where it hasn't been used in the last 30 days
- Summarize this dashboard
- How do maintenance windows work?
- What does the "Deploy Client Configuration and Support [Windows]" Action do?

Customer Pain Points

Data overload with no context

IT operations and security teams are managing large volumes of real-time data streaming from multiple tools and sources, often lacking clear prioritization or context.

Reactive posture

Due to information load, teams often find themselves in reactive mode when incidents occur, leaving the teams vulnerable to increasingly sophisticated threats. The overwhelming flow of alerts and the lack of context to prioritize effectively lead to missed signals and erode trust in an organization's ability to keep the business running optimally and securely.

Resource constraints

Organizations face the challenges of capacity and specialization when they manage complex and diverse infrastructure, resolve support tickets, and monitor and protect the attack surface—all while learning the technical nuances of the tools required for success.

The Tanium Solution

Tanium Ask Agent, not only provides insights into issues, it empowers you to solve them. By leveraging the broad capabilities that the Tanium platform offers across endpoint management, exposure management, and security operations, Ask Agent makes it easy to go from insight to action in a single workflow.

- Integrated experience from discovery and investigation to remediation
- Ensure software is optimized and up to date
- Extract insights from data

Integrate AI-driven workflows to simplify operations, automate insights, and scale efficiency.
