

Tanium Comply

Identify vulnerabilities and misconfigurations across distributed environments.

Identifying exposures within minutes across distributed endpoint environments. Then, prioritize remediation workflow to reduce biggest sources of risk. And, validate work to meet regulatory requirements.

Eliminate your biggest source of endpoint risk

Zero-day threats and advanced malware are not the biggest problems. Instead, most breaches exploit known asset vulnerabilities or simple application misconfigurations.

To close this risk, organizations must continuously scan their endpoints for vulnerabilities and misconfigurations, and rapidly prioritize and remediate the problems they find.

Unfortunately, existing vulnerability management tools are:

- **Slow:** They take days or weeks to complete scans and serve stale data.
- **Siloed:** They don't work together and isolate security and operations teams.
- **Inefficient:** They consume heavy bandwidth and impact network performance.
- **Limited:** They produce blind spots and do not prioritize the risks they do find.

Clearly, organizations need a new approach.

Meet Tanium Comply: a modern vulnerability management solution

Tanium Comply is a unified vulnerability management tool built to assess modern endpoint environments.

With Comply, organizations can continuously scan their endpoints for vulnerabilities, misconfigurations, and incidents of noncompliance with internal standards or external regulations. With this real-time data, organizations can prioritize the problems they find, drive remediation, and validate whether they've addressed their risks.

Collect real-time vulnerability data

Generate assessment results in minutes, and perform one-click reporting to prioritize remediation, help meet regulatory requirements and validate remediation efforts.

Eliminate network blindspots

Perform comprehensive scanning across critical endpoints and their vulnerability and compliance exposures, including offline endpoints and unmanaged devices.

Improve compliance coverage

Identify the percent of total endpoints covered by compliance assessments, to find and fix gaps that lead to inaccurate data and increased risk exposure.

Reduce endpoints with vulnerabilities

Measure the total percentage of endpoints with high or critical security exposures, and demonstrate progress toward reducing risk of disruption or breach.

Real-time visibility

Identify and assess unmanaged endpoints in user environments. Comply finds select IP-enabled devices within distributed networks — even if they don't have a Tanium agent installed — and then collects their keys, unlocks their metadata, and determines if they carry vulnerabilities, misconfigurations, or other risks.

- Tanium satellite services
- Tanium discover

Rapid response

Perform scheduled or ad hoc scans without fear of end user impact. Comply uses Tanium's patented linear chain architecture to assess large-scale distributed endpoint environments without generating meaningful network strain, letting organizations collect accurate, real-time vulnerability intelligence anytime they want it.

- Linear chain architecture
- Tanium data services

Complete control

Meet internal standards and help fulfill requirements for regulations like PCI, HIPAA, and SOX. Comply supports the Security Content Automation Protocol (SCAP), can use any Open Vulnerability and Assessment Language (OVAL) content, and uses its own content library that's updated daily with vulnerability, compliance, and CIS definitions and benchmarks.

- Security Content Automation Protocol (SCAP)
- Open Vulnerability and Assessment Language (OVAL)
- Vulnerability content library

Single source of truth

Comply gives security and operations teams a single source of truth, and integrates with other Tanium solutions to seamlessly pivot from assessment to remediation, to validation within a single agent and console.

- Integration to Tanium platform

Tanium Comply is a key component of Tanium Risk and Compliance Management solution

Tanium Risk and Compliance Management solution provides a real-time view of your risk posture across your environment.

Tanium platform power

The Tanium platform is built to deliver all IT operations and security services from a single agent. The Tanium client gives organizations comprehensive visibility over their endpoints and the ability to take action on those endpoints using minimal infrastructure. Patching, compliance, inventory, and incident response can all be completed using the Tanium endpoint agent.

Tanium is the platform that organizations trust to gain visibility and control across all endpoints in on-premises, cloud and hybrid environments. Our approach addresses today's increasing IT challenges and delivers accurate, complete and up-to-date endpoint data — giving IT operations, security and risk teams confidence to quickly manage, secure and protect their networks at scale. Tanium's mission is to help see and control every endpoint, everywhere. That's the power of certainty. Learn more at www.tanium.com.
