

Revolutionize IT and security operations visibility, remediation and automation with a unified platform approach

Provide IT, security, and risk teams the visibility they need to make informed decisions

Your configuration management database (CMDB) should be the single source of truth to power processes and decision-making across your IT organization. But it's only as good as the data you put into it.

Organizations struggle with lack of visibility into their entire IT estate, creating:

Siloed data sources

Compounding complexity

Audit, compliance, and security risk

And with so many different tools, automation breaks down and cost and risk escalate. As a result, many organizations face serious challenges, including:

of organizations that ignore CMDB data quality gaps will face business disruptions

of IT decision-makers can see over 85% of devices connected to their networks

of risk managers faced three or more critical events in the past year due to CMDB inaccuracies

Organizations need to leverage a strategic platform approach to solve for today's challenges and meet the needs of tomorrow.

Real-time, complete data meets automated workflows: Introducing Tanium ITX and Tanium Security Operations for ServiceNow.

Get complete visibility into all your assets and improve remediation processes with automated IT operations and security workflows. The integration of Tanium and ServiceNow enables a healthy CMDB in ServiceNow with end-to-end, accurate, and up-to-date data to spur automated threat resolution.

Tanium ITX for ServiceNow

Learn More

Optimize software, hardware, and virtual asset inventory, and reduce risk with real-time asset visibility.

- Maintain an accurate, up-to-date ServiceNow CMDB by streaming real-time endpoint data
- Reduce costs by optimizing hardware and software licenses—eliminating unnecessary spend
- Improve incident response and remediation times by enabling investigation and actions on endpoints directly from ServiceNow
- Automate software deployment and license management through a self-service software
- Enable proactive patch management by leveraging real-time endpoint data

With Tanium ITX for ServiceNow, you can provide complete visibility into inventory and usage in the ServiceNow CMDB, and augment operations across IT Service Management, IT Asset Management, and IT Operations Management.

Tanium Security Operations for ServiceNow

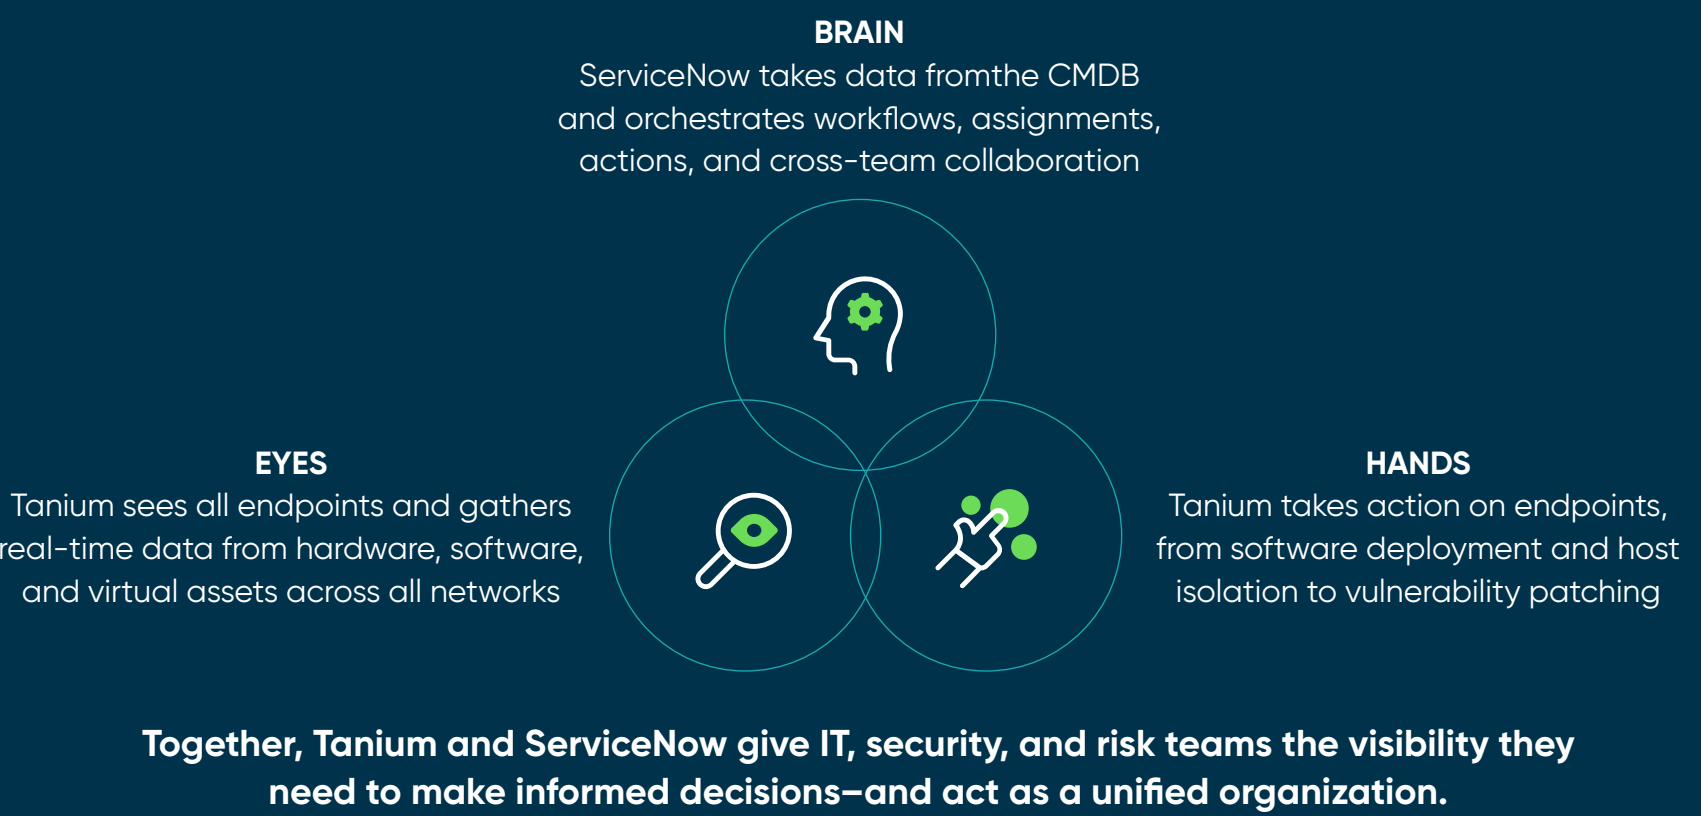

Learn More

Identify, correlate, prioritize, and remediate risk of endpoint vulnerabilities and security incidents in real time.

- Automate vulnerability scanning and compliance assessments to prioritize remediation based on risk calculations
- Leverage workflows and automate patch orchestration based on applicability, detected vulnerabilities, and compliance gaps
- Leverage real-time endpoint data, alerts on unauthorized changes, remediation actions, and threat intelligence searches to remediate security incidents within ServiceNow
- Reduce the impact and cost of security breaches by accelerating end-to-end vulnerability response

With Tanium Security Operations for ServiceNow, you can unify IT, security, and risk teams in ServiceNow to proactively identify, prioritize, and remediate risk from vulnerabilities, unauthorized changes, non-compliant configurations, and security incidents with end-to-end automation and orchestration.

Here's a simple representation of how Tanium ITX and Tanium Security Operations for ServiceNow works:

End-to-end data, automation, and control with Tanium and ServiceNow

Visibility

Optimize software, hardware, and cloud costs with real-time visibility and CMDB data you can trust.

Automation and control

Automatically correlate configuration items with real-time vulnerability, configuration compliance, and change authorization assessments.

Remediation

Prioritize, remediate, and validate change outcomes with patch orchestration at scale.

Address the complex challenges of future-ready security operations with a unified strategic platform approach

Together, Tanium and ServiceNow help organizations leverage real-time data, gain 100% visibility, and improve the total experience—reducing cyber risk and increasing control.
