

Tanium + IBM Cloud

Tanium’s integration with IBM Cloud offers simple, enhanced visibility, control and remediation tools to secure and protect critical workloads in a hybrid cloud environment.

Regulated industries like financial services are moving to the cloud for its enablement of agility and innovation. But that digital transformation brings enormous risk and stringent compliance regulations.

Through our combined technologies, you can now **achieve cloud benefits and get built-in protection of your entire estate of cloud, on-prem, and remote assets, with a unified dashboard.** Simplify security and compliance by using one location to monitor and remediate. Then develop and deploy with confidence.

99+%

SUCCESS RATE OF FIRST-PASS PATCHING

Dramatically increase the efficacy of your patch process, and reduce time frames from weeks to less than 24 hours with Tanium’s Endpoint Management platform.

8 of 10

TOP U.S. FINANCIAL INSTITUTIONS RELY ON TANIUM

Your trust in Tanium is backed by half of the Fortune 100, 70% of top retailers, and five branches of the U.S. military. Over 25 million endpoints are managed globally.

550+

SECURITY AND TECHNICAL CONTROL REQUIREMENTS

The IBM Cloud Framework for Financial Services,* based on global regulatory requirements, simplifies risk management by automating pre-configured controls.

The Challenge

Regulated industries need to prove continuous compliance across hybrid cloud environments. But they often lack accurate data for audit and compliance reporting and real-time endpoint visibility.

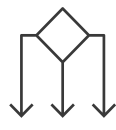

Multiple tools and clouds must be wired together, which creates a clunky experience with increased risk exposure that may prevent cloud migration altogether.

The Solution

The Tanium and IBM integration provides a consistent approach for highly regulated industries to achieve the benefits of the cloud while still protecting assets everywhere.

A unified dashboard expands visibility of security and compliance data across an entire estate and performs patches and updates, all in one place.

TANIUM SOLUTIONS

Endpoint Management

Manage end user, server and cloud endpoints on a single platform with ultimate visibility and control at scale.

Endpoint Security & Risk

Identify and protect managed and unmanaged devices, and respond to threats and breaches with near-instant speed, visibility and control, at any scale.

The IBM Partner Advantage

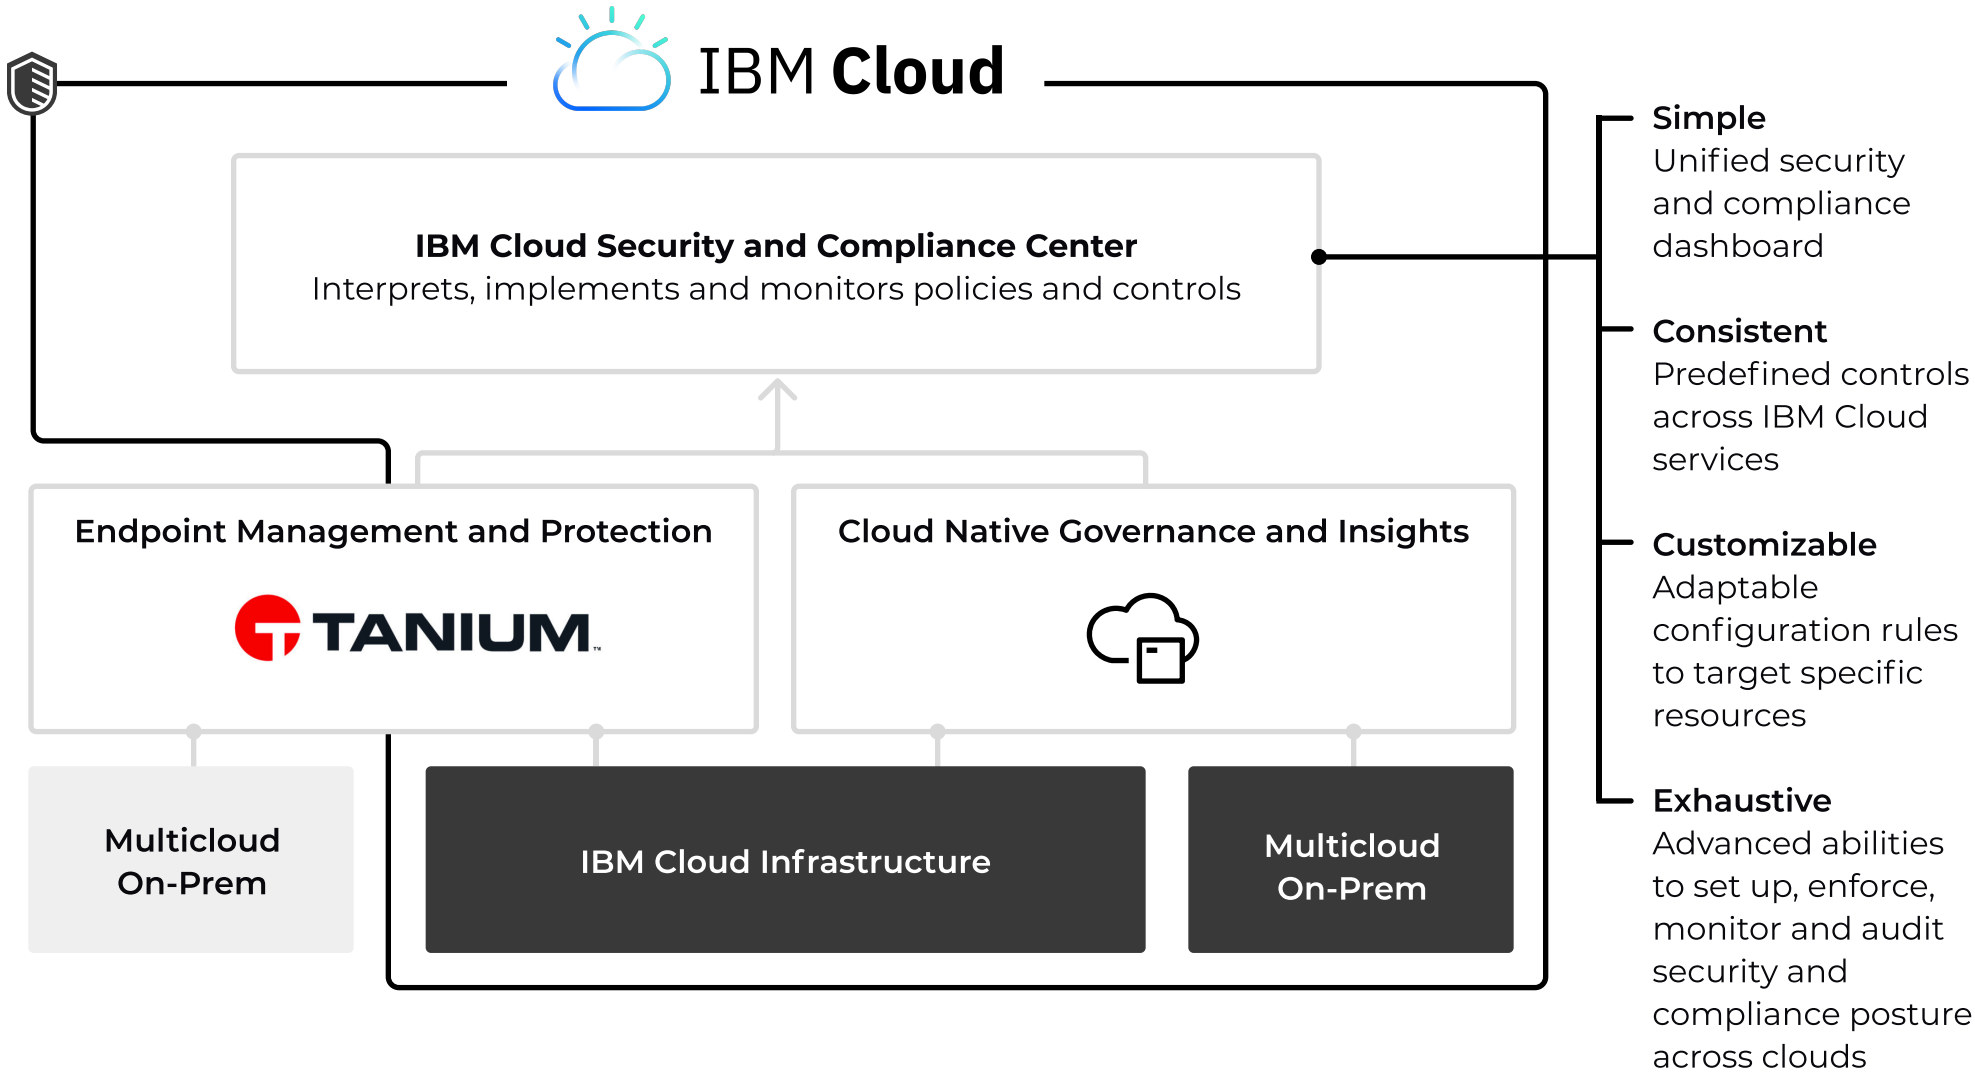

With the IBM Cloud Framework for Financial Services and a common set of pre-configured compliance controls, you can seamlessly onboard your regulated workloads and connect all of your clouds and existing applications. Continuous visibility to security posture helps you manage workloads, demonstrate regulatory compliance faster and more efficiently and reduce compliance costs.

Financial institutions have the additional benefit of hosting applications on the **IBM Cloud for Financial Services**. This industry-leading public cloud was designed specifically for the sector in collaboration with expert C-level industry leaders and regulatory advisors.

IBM CLOUD SECURITY AND COMPLIANCE CENTER (SCC)

The SCC is at the heart of IBM Cloud. It functions as a unified dashboard for security, governance and compliance posture management.

Through the SCC, financial institutions and digital supply chain providers can automate discovery and monitor conformance to policy profiles throughout the software development lifecycle.
