# Tanium Asset

Get a Complete Inventory of Hardware and Software Assets Across Your Environment

IT Assets Should Not Be Liabilities

IT operations teams often struggle to identify the machines on their network, as well as what software they have and how it is being used.

An organization's ability to run its business is hindered when strategic decisions are made based on outdated and incomplete data. Even worse, not understanding your assets and what's running on them leads to poor IT hygiene, increasing cyber risk.

From the coffee shop to the cloud, the number of endpoints companies must be aware of continues to grow. As a result, visibility is increasingly more difficult and more critical in IT operations and security.

You must be equally aware of the servers in your datacenter and the laptops used by remote staff. Having an accurate inventory of your assets reduces incident resolution times, avoids disruptive changes due to visibility gaps, and assists when reviewing software licensing.

The Tanium Difference

With Tanium Asset, IT operations and asset management teams get real-time data about their IT assets, regardless of location or whether on- or offline. These rich insights help organizations make the right decisions about managing their assets efficiently.

Tanium Asset brings complete inventory and reporting into a single solution without adding agents on the endpoint and with little to no infrastructure.

Tanium Value Metrics

Through comprehensive and real-time analytical insights about their devices, Tanium helps organizations measurably improve IT hygiene, employee productivity, and operational efficiencies while reducing risk, complexity, and costs.

Software Usage Coverage (% of total endpoints)

Are You Tracking Everything You're Supposed To? Many organizations are not aware of all their networked devices. Percent of Total Endpoints tells you what percentage of your networked devices is known, helping identify potential risks.

Tracked Software Unused (% of software)

How Much Software Are You Paying For and Not Using? With Percent of Software Unused, organizations can clearly understand where software is installed and how it is being used—or not, helping companies reclaim millions of dollars in software license fees.

Automate Asset Reporting With Speed and Accuracy

Quickly and easily find, inventory and maintain IT assets. Tanium's approach to endpoint visibility and control allows IT teams to take a real-time inventory of hardware and software assets. Utilize automated and predefined reports and dashboards with details by department, location, user group, and more.

Know what you have at all times.

Optimize through hardware and software changes.

Configurable Reporting for Inventory and Audit Preparation

Make data-informed decisions about hardware and software across the environment. Extract insight for all assets within seconds and run quick configurable reports to help streamline inventory and audit preparation. Make the right changes around software licensing depending on usage, or on hardware decommissioning based on asset location—remote, on-premises, or in the cloud.

Third-Party Data Enrichment

Increase throughput by reclaiming underutilized assets and improve reporting from third-party data stores. Organizations depend on the accuracy of Configuration Management Database (CMDB) information. Tanium Asset feeds real-time data into common CMDBs, such as ServiceNow, so you have the freshest and most accurate information. For offline devices, Tanium Asset provides reporting on the last known state of the device.

Augment third-party data stores and other IT investments.

Tanium Asset Is a Key Component of Endpoint Management

Immediately discover assets, remediate across diverse environments and operating systems, and monitor the performance of endpoints with real-time visibility, comprehensive control and rapid response. Tanium provides endpoint management at scale, all from a single platform for consolidated control and visibility.

Tanium Platform Power

The Tanium platform is built to deliver all IT operations and security services from a single agent. The Tanium client gives organizations complete visibility over their endpoints and the ability to take action on those endpoints using minimal infrastructure. Patching, compliance, inventory, and incident response can all be completed using the Tanium endpoint agent.

Discover Your Gaps

Request an IT Gap Assessment to gain visibility into your current IT hygiene and to measure your current Cyber Risk Score.
