

Tanium Risk

Deliver a comprehensive, risk-based view to inform and prioritize actions on endpoints.

Measure and manage your endpoint risk. Create an accurate, real-time view of endpoint risk in your environment, perform guided remediation of your most critical problems, and track your progress to demonstrate objective improvement for your senior stakeholders.

Take control of your endpoint risk

Cybersecurity threats are growing. Breaches are causing hundreds of millions of dollars in damages. Endpoint risk has become a board-level concern.

Unfortunately, most organizations lack an effective, unified approach to measure and manage the endpoint risk in their environment. Instead, they assemble a patchwork of legacy tools and processes that are:

- **Inaccurate:** They perform slow, infrequent scans that deliver stale data.
- **Incomplete:** They collect limited data and create a piecemeal view of enterprise risk.
- **Impractical:** They don't prioritize risks and silo analysis from remediation.
- **Ad hoc:** They lack a well-defined process to systematically reduce IT risk.

Organizations need a new approach.

Meet Tanium Risk: a modern risk and compliance solution

Tanium Risk is a unified scoring and management tool.

With Risk, organizations collect real-time endpoint data at scale. They calculate a dynamic risk score for every assessed endpoint and the environment as a whole. They follow a clear path toward improving their scores and tangibly reducing their endpoint risk.

Secure business-critical assets

Utilize real-time risk and threat data

Continuously gather risk data across your endpoint environment and compare it against industry benchmarks.

Unify teams around one plan of attack

Prioritize and perform remediation

Identify your most critical risks, and seamlessly pivot to remediation — either through guided workflows, or through one-click, in-console actions like patching.

Improve risk and compliance posture

Objectively reduce endpoint risk

Create an easy-to-understand risk score for your enterprise, and watch that score go down in real time as soon as you perform remediation actions.

Inform stakeholders of meaningful metrics

Demonstrate control over risk

Report objective, trackable progress to your senior business stakeholders, show them that your endpoint risk is known and under control, and increase your board-level credibility.

Real-time visibility

Endpoint-focused view on risk

Learn which of your endpoints carry the most risk and how to remediate them. Risk starts by assessing and scoring each endpoint device against multiple vectors, including vulnerabilities, threats, compliance, patch status, sensitive data, and susceptibility to recent large-scale breach patterns.

- Asset criticality

Single source of truth

Simplified enterprise-wide risk score

Substantially eliminate guesswork and ambiguity. Risk uses a proprietary algorithm to average your endpoint risk scores, and then gives you a clear, simple, easy-to-understand enterprise risk score between 0 – 1,000, with lower scores demonstrating less risk.

- Risk score

Complete control

Bite-sized view on risk

Reduce the overwhelm. Risk does not flood you with 100,000 problems to solve. Instead, it gives you a doable list of the most important 10 – 20 actions you can take next to reduce the most critical risks in your environment.

- Actionable insights

Rapid response

Integrated remediation workflows

Combine analysis with remediation. Risk gives you guided workflows to eliminate your biggest risks, integrates with the full suite of Tanium remediation modules, and even lets you remediate certain risks in console with one click.

- One-click patching with Tanium Patch

Tanium Risk is a key component of Tanium Risk and Compliance Management solution

Tanium Risk and Compliance Management solution provides a real-time view of your risk posture across your environment. With Tanium, the power of complete, accurate and up-to-date endpoint data for operations, security and risk teams is unparalleled.

Tanium platform power

The Tanium platform is built to deliver all IT operations and security services from a single agent. The Tanium client gives organizations comprehensive visibility over their endpoints and the ability to take action on those endpoints using minimal infrastructure. Patching, compliance, inventory, and incident response can all be completed using the Tanium endpoint agent.

Tanium is the platform that organizations trust to gain visibility and control across all endpoints in on-premises, cloud and hybrid environments. Our approach addresses today's increasing IT challenges and delivers accurate, complete and up-to-date endpoint data — giving IT operations, security and risk teams confidence to quickly manage, secure and protect their networks at scale. Tanium's mission is to help see and control every endpoint, everywhere. That's the power of certainty. Learn more at www.tanium.com.
