

# Tanium solutions overview

Trust Tanium solutions for every IT workflow that relies on endpoint data.

The Tanium XEM platform is the only platform that identifies, prioritizes, and remediates IT and security issues in real time from a single console. Reduce your endpoint risk and operate a fundamentally more secure, compliant, and efficient digital estate. Learn more about each of the Tanium platform solutions below.

## Tanium XEM Core

Gain complete visibility into your digital estate, an accurate, real-time picture of every endpoint in your environment, and a single source of truth for their management and security – at any scale and regardless of location.

- Identify and inventory all your endpoints.
- Assess risk for your managed endpoints.
- Gather asset data for security and compliance reporting.
- Track software usage and metering for informed reclamation.
- Identify runtime libraries, open-source firmware, and software packages.
- Inventory certificates and learn when they will expire.

## Endpoint Management

Close the biggest sources of operational and security risk in your environment. Endpoint Management gives you visibility and control over every endpoint that connects to your network and automates, streamlines, and simplifies every core endpoint-related workflow.

- Create new endpoints, or repurpose or refresh existing endpoints, up to 8x faster.
- Maintain up-to-date patches and updates on your endpoints and applications to close known risks.
- Simplify and automate many aspects of endpoint management while driving self-serve functions.

## Risk & Compliance

Visualize your risks and exposures, prioritize your most critical issues, and arm yourself with the details and context you need to remediate vulnerabilities and weak configurations.

- Continuously scan for vulnerability and compliance gaps across every managed and unmanaged endpoint in your estate.
- Take a proactive, collaborative, and risk-based approach to deciding which vulnerability and compliance gaps to close first.
- Deploy a wide range of controls – remote, at scale, in real time – to close your vulnerability and compliance gaps.

## Incident Response

Dramatically reduce your Mean Time to Resolve (MTTR) for security incidents. Tanium augments SIEM and EDR to accelerate and improve your end-to-end incident detection, threat hunting, investigation, containment, and remediation capabilities.

- Discover incidents in progress, investigate what caused them, and determine the full scope of the threat and how to stop it.
- Automatically contain threats to stop them from spreading and causing further harm before you remediate them.
- Stop the incident, evict the attacker, restore normal business operations, and harden against future incidents.

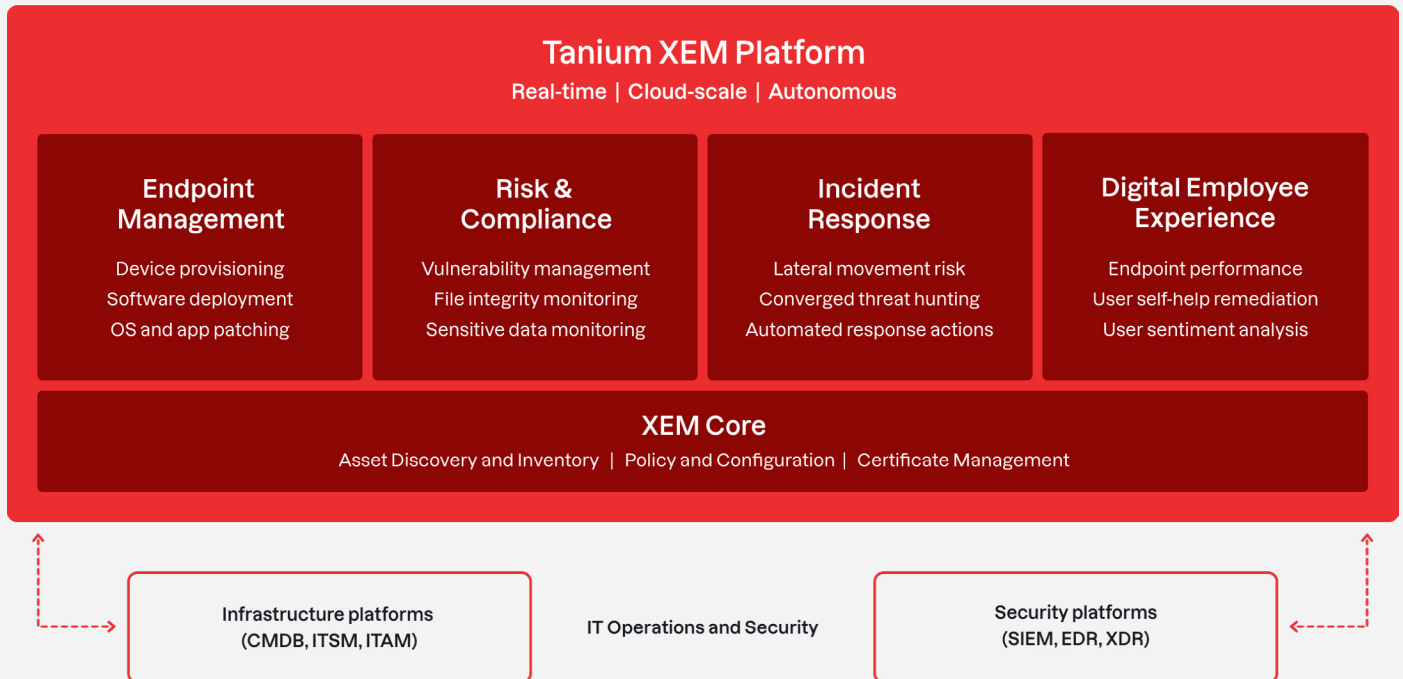

## Digital Employee Experience (DEX)

Monitor, manage, and improve your employees' digital employee experience at scale with automated self-healing. Tanium gives you real-time visibility, scalable control, and a data-driven understanding of how to improve your employees' digital experience.

- Remediate issues with employee endpoints and applications before they lead to reduced performance.
- Create a bidirectional feedback loop to learn employee sentiment and improve their digital employee experiences.
- Monitor, measure, and manage digital employee experience through data-driven reporting.

# Converged Endpoint Management (XEM)

Visibility, control, and remediation for all endpoints

## OUR PLATFORM

### The XEM platform proactive teams trust

The Tanium XEM platform begins with XEM Core for unrivaled visibility into your IT estate. Additional solutions provide complete control and remediation for all your endpoints.

#### REQUEST A DEMO

Let us show you how Tanium XEM gives you visibility, control, and remediation for every endpoint in your environment — in real time, no matter where they live.

Tanium, the industry's only provider of converged endpoint management (XEM), leads the paradigm shift in legacy approaches to managing complex security and technology environments. Only Tanium protects every team, endpoint, and workflow from cyber threats by integrating IT, Compliance, Security, and Risk into a single platform that delivers comprehensive visibility across devices, a unified set of controls, and a common taxonomy for a single shared purpose: to protect critical information and infrastructure at scale.
