TANIUM™

# Tanium Converged Endpoint Management (XEM) Platform

**See, control, and remediate every endpoint. Gain an accurate picture of every endpoint in your environment, maintain their security and performance, and resolve any incident — in real time and at any scale.**

The Tanium XEM Platform is the only platform that identifies, prioritizes, and remediates IT and security issues in real time from a single console. Reduce your endpoint risk and operate a fundamentally more secure, compliant, and efficient digital estate.

## Your challenge: Managing and securing a growing global network of endpoints

In 2023, organizations are expected to spend $219 billion on cybersecurity, yet despite this expense, there is a ransomware attack every 11 seconds. While security budgets rise each year, the vulnerability gap isn't closing – it's getting worse.

**That's because the current approach to IT security is flawed.**

Digital transformation and hybrid work have unleashed an explosion of endpoints in our IT environments. In response, organizations attempt to tame this proliferation of endpoints with an expanding arsenal of point tools. But it's not enough to keep up.

These IT operations and security tools provide only limited visibility into our environments and enable shadow IT to explode. That's why 20% of all endpoints remain undiscovered and unprotected, on average, leaving a huge hole for attackers to exploit.

Similarly limited remediation tools have our security practitioners hamstrung and lacking the capacity to locate, prioritize, and remediate known vulnerabilities. It takes the average organization up to 150 days to patch a vulnerability, giving attackers ample time to find the gaps.

All the while, IT environments around the globe cross their fingers and hope that they won't be making the next cyberattack headline.

The result?

### 70%
of organizations experienced breaches through assets they didn't know they had

### 94%
of IT decision makers discovered endpoints in their organization they weren't aware of

### 80%
of MTTR (Mean Time to Resolve) is spent determining which changes may be responsible for an outage or security incident

---

**Working blindly**

IT and security teams are working blind and can't do basic tasks like patching at speed and scale.

**Unanswered questions**

IT leadership and the C-suite can't answer fundamental questions about the size and health of their digital estate.

**Security risks**

Organizations carry significant operational and security risk because their digital estate is flooded with unknown endpoints with hidden vulnerabilities.

> "Aside from Tanium, there's really nothing else in the market that could solve our problem of gaining visibility for nearly 100,000 endpoints. Nothing else comes close."

**Dough Shepard**
Sr. Director, Offensive Security Services, JLL

## Your solution: See and control every endpoint, at any scale, in real time, with the Tanium XEM Platform

Tanium offers the only converged endpoint management (XEM) platform that combines end-to-end visibility, control, and remediation in one place.

Tanium gives you real-time and accurate data on every managed and unmanaged endpoint in your environment. It then provides a complete suite of capabilities to manage those assets, harden your network, and respond to endpoint incidents in real time.

The Tanium XEM Platform is built from the ground up with visibility, extensibility, and scale in mind. The platform powers thousands of use-cases uniting IT operations and security teams and empowering them to gather granular data and perform mission-critical operations.

With Tanium:

- IT and security teams regain control of endpoints, streamline their workflows, improve their defenses, and increase their efficiency by replacing countless point tools with one converged solution.

- IT leadership and the C-suite can answer fundamental questions about their environment with accurate, complete, up-to-date data about every endpoint in their estate — in seconds.

- Organizations gain the ability to track and reduce their endpoint risk over time while cutting costs, automatically reclaiming funds from unused software assets, and lowering the chance of suffering a breach or fine.

### Identify and inventory all your endpoints

See every endpoint in your environment — whether they are in the cloud, on or off VPN, remote, or onsite. Collect granular information for each of them, with the capacity to monitor limitless attributes for managed endpoints.

### Gather asset data for security, usage, and compliance reporting

Locate your applications, runtime libraries, open-source freeware, and software packages on your assets. Save budget by tracking software usage and align teams around a single source of truth to prepare for the unknown.

### Automate patch management

Remediate vulnerabilities on thousands of endpoints in minutes. Increase patch compliance and secure systems and data in real time at scale.

### Optimize your organization's digital work experience

Perform root cause analysis at the organizational or device level to identify actionable opportunities that can be used to raise health scores and employee sentiment.

### Integrate with other security and IT ops tools

Leverage pre-built integrations with many common IT operations and security tools. Increase the ROI of your existing investments with custom and native integrations with SOAR, SIEM, and CMDB tools (including ServiceNow and Splunk).

### Enable remediation actions at scale

Leverage dynamic and extensible remediations capabilities to orchestrate advanced multistep remediation actions.

# Gain a single, unified solution to manage and secure every endpoint in your environment in real time, at any scale

Tanium gives you a range of benefits to rapidly and efficiently keep your endpoints secure, compliant, and performant — no matter how many you have, no matter where they live.

## Visibility

Gain full visibility of your digital estate. With Tanium you will create a complete and accurate picture of your endpoints — including unmanaged and rogue endpoints, and all of your software supply chain — in minutes.
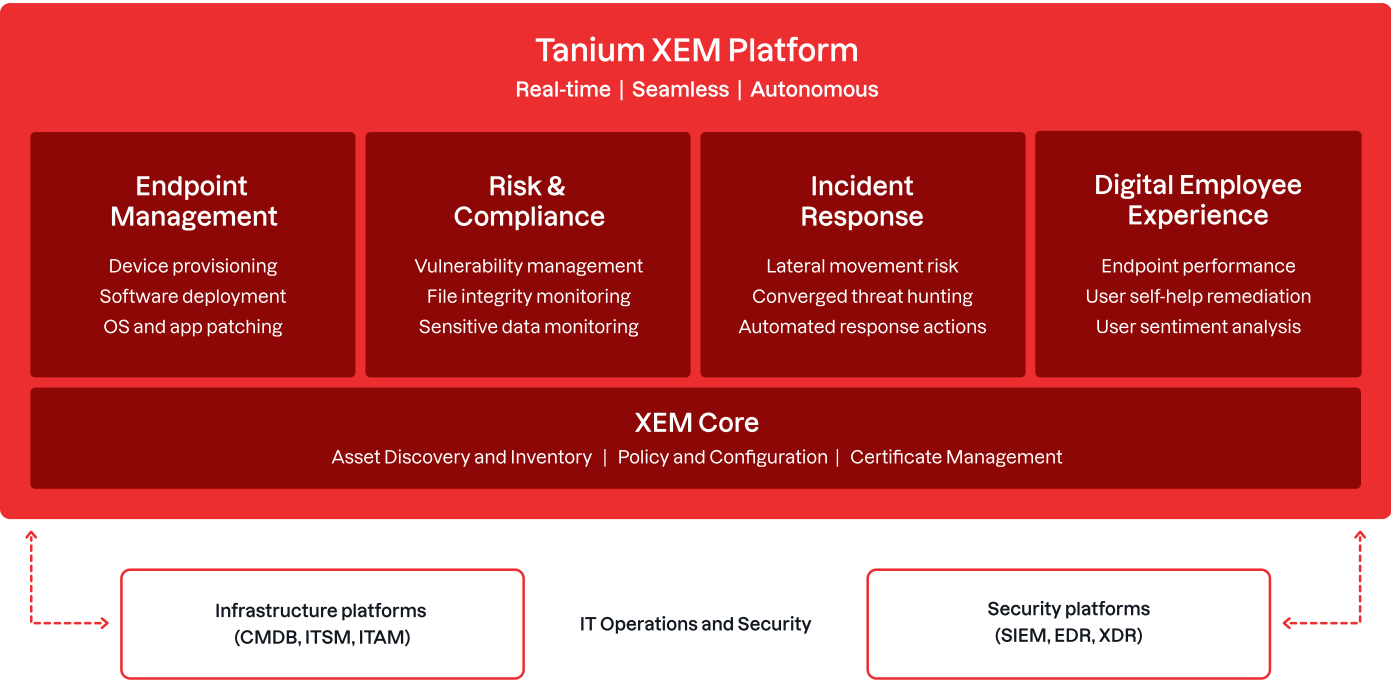

## Control

Manage digital assets, streamline workflows, and bolster security. With Tanium you will rapidly apply a wide range of controls to the endpoints in your environment —anywhere they live — without creating disrupting operations.

## Remediation

Pivot from monitoring and investigating incidents to remediating them within the same console. Rapidly respond to security and operational incidents with surgical precision at any scale.

# Converged Endpoint Management (XEM)

Visibility, control, and remediation for all endpoints

## Tanium XEM Platform
### Real-time | Seamless | Autonomous

| Endpoint Management | Risk & Compliance | Incident Response | Digital Employee Experience |
|---|---|---|---|
| Device provisioning | Vulnerability management | Lateral movement risk | Endpoint performance |
| Software deployment | File integrity monitoring | Converged threat hunting | User self-help remediation |
| OS and app patching | Sensitive data monitoring | Automated response actions | User sentiment analysis |

### XEM Core
Asset Discovery and Inventory | Policy and Configuration | Certificate Management

Infrastructure platforms (CMDB, ITSM, ITAM)

IT Operations and Security

Security platforms (SIEM, EDR, XDR)
